

LPG CARRIERS

A ship management company chose Enviropeel for LPG carriers suffering from rapid corrosion in flange joints and bolts. An LPG vessel's deck looks like a small refinery with hundreds of pipes and flanges - all exposed to the worst possible conditions as they batter their way across the world's oceans.

The first vessel was carrying ammonia in the Caribbean. This required a specially-designed twin-detector zone 2 unit to be designed and built, with one gas detector for methane and one for ammonia.

A second unit was later commissioned with a larger 30 kg tank and twin independently-pumped hoses to enable the specially-trained crews to complete the Enviropeel protection more rapidly. The photos show a wide variety of applications on two of the company's vessels.

Above and right: Enviropeel can coat complex structures, large or small.
